## A first-of-its-kind kit that provides “on-demand” instructions for bleeding control

It has long been known that bystanders are often the true first responders to the scene of an injury, but more times than not the general public does not have the equipment to render care to an injured person. The Audio Bleeding Control Kit from North American Rescue removes this obstacle by providing life-saving bleeding control products in a small, portable box capable of being stored on a bookshelf, desk, etc. for easy access. The instructions for application of the bleeding control items are read aloud in either English or Spanish, and the user can listen and follow along providing care as it plays.

After the events of Sandy Hook Elementary School, the American College of Surgeons convened a committee to recommend a national policy to enhance survivability from active shooter and intentional mass casualty events. This collaborative effort featured the National Security Council, the FBI, the US Military and others, and their recommendations were called the Hartford Consensus. The Hartford Consensus promotes improving survival with the mantra “See Something, Do Something.” The intent is that chance of survival can be greatly increased if the first person on the scene provides at least some level of care until the trained professionals arrive with more definitive care. The Audio Bleeding Control Kit empowers and equips each and every individual with the resources to actually “Do Something” to improve survival.

The Audio Bleeding Control Kit differentiates between severe bleeding (to an arm or leg only), moderate bleeding, or minor bleeding to help the user determine which supply pack to use. The supply packs are easily identified as they are color coordinated, and they are easy-to-open with tear notches featuring NAR Signature Red-Tip Technology®. The audio module is equipped with Play/Pause buttons for each supply pack type, as well as back, forward, and stop buttons for ultimate control over the pace and order of instructions. A power button on the audio module also preserves battery life until the unit is required, and volume control is also provided (default volume is max for use in loud or chaotic environments).

Audio Bleeding Control Kits are available with the option of either a Black or Orange C-A-T® Gen 7 Tourniquet. Re-supply packs are also available for each supply pack module. For additional Audio Boxes without contents, please call customer service for details.

### Features:

- The only bleeding control kit that provides step-by-step guidance through the process of providing bleeding control care
- Gives “on-demand” audio supported with illustrated visual prompts to care providers
- Supply Pack modules designated by injury, severity and location, making decisions easier for individuals providing care
- Easy-to-use keypad and simple operation allows control over the audio instructions

- Audio prompts provided in both English and Spanish
- Lightweight, portable, and comprehensive box that is easily stored on any horizontal surface
