

Our Lena free-standing gantry system is a perfect alternative when building modification is not possible. It works seamlessly with all our lifts and its flexibility means that it is easily moved to where it's needed most. With a high weight capacity, the Lena provides a safe and easy lifting solution for most patients.

Portable Solution

Sometimes a facility or homeowner does not want to modify the existing building structure to install an overhead rail system or sometimes only a temporary solution is required. That is when the Lena is the perfect option. Portable, easy to use and assemble, it won't affect walls or ceilings. Its compatibility with our Altair series, HeliQ series and Roomer S allow it to be used by a number of patients or lifting situations.

Versatile

The Lena is available in two widths, both of which easily fit over a standard bed. Combined with our overhead lifts and slings, a caregiver can easily lift and move patients without risk of injury. The aesthetic powder

coated white finish ensures the Lena seamlessly fits into any room environment including bathrooms. With optional wheels added, it can easily be transported from room to room.

Quality

Our products are designed and manufactured to meet all the requirements of relevant ISO, UL, IEC and EN standards. At every stage of the development process, every single product is given extensive attention in design, development and manufacturing. This means that a user of this product feels confident with its reliability and the caregiver feels confident with its safety.

Lifting Situations

Use to/from a bed

Can be placed over bed for transfers and repositioning with a ceiling lift/sling.

Use to/from a chair

Can be placed over a chair for transfers with a ceiling lift/sling.
