

# CERVICO 2000™

## 3D Mobile Spinal Decompression

Cervico 2000™ is an ambulatory decompression device for the treatment of acute and chronic neck pain. Easily tailored to the specific needs of each patient, Cervico 2000™ is one of the few devices that enables both symmetric and asymmetric traction to the cervical spine and the **only** device that uses 3 dimensional traction. Cervico 2000™ goes beyond pain relief to targeting the actual cause of the pain by actively promoting the healing of such disorders and injuries as herniated discs, torticollis and whiplash. During treatment, patients are completely mobile, encouraged to perform light activities and exercise for active rehabilitation.

### Why Meditrac ?

Meditrac is a leader in the development testing and manufacture of innovative medical devices for the ambulatory non-surgical treatment of spinal disorders. The "Traction on the Move" concept, developed by a team of ortopedic surgeons, combines the benefits of traction therapy with freedom of movement for rapid relief and a sense of well-being.

### Why choose cervico2000?

- A portable Cervical treatment solution that increases patient compliance and satisfaction.
- One size fits All.

#### Symmetric Traction

#### Asymmetric traction

Customizable

Costeffective

Compact & user friendly

Complete freedom of movement

# CERVICO 2000™

## Traction on the Move By Meditrac

### Results that Count

Traction decreases intra-discal pressure on the nerve root and dural sac. Disc disorders are accompanied by muscle spasm and reduced transfer of fluid. Due to the disc's unique structure, stationary body positioning causes reduction in fluid exchange and accelerates disc degeneration. Research shows that transfer of fluid is essential for the normal biomechanics of the disc and is possible when the spine is in motion. The Traction on the Move concept is based on combining motion with traction which simultaneously decreases pressure, enables fluid exchange, improves Range of Motion (ROM) and promotes recovery. Cervico 2000, enables application of distraction force directly to the cervical spine alongside the cervical lordosis while retaining patient mobility. The device is reimbursable for clinic use & chronic patients for homecare use & no need for Drugs or hospitalization.

### X-Ray Results with Cervico 2000™ widens intervertebral space and releases compression

#### Before Treatment

The cervical spine before treatment shows hyperlordosis with nerve compression in the intervertebral foramen.

#### During Treatment

The cervical spine during Cervico 2000™ treatment exhibits hyperflexion. The intervertebral foramen is open, there is no nerve compression and the intervertebral space is widened.

### Indications for use:

- Discogenic Origin.
- Osteoarthritic.
- Whiplash injury.
- Degenerative disc disease.
- Nerve root compression.
- Radiculopathy.

#### Warning & Precautions

- According to the FDA in the USA the sale of this device is restricted to individuals by or on the order of a physician only.
- The instructions provided by your health care provider should be followed precisely.
- Do not exceed the recommendations of your health care provider.
- The Cervico carries the CE mark.
