Swing hangar

Swing hangar

Optional Swivel

Stainless steel,
1,800 Lbs. capacity

The Take a Swing line up of portable swing frames is now:

1. The Homestand II and the less expensive
2. HPSI (Essentially the same, just 1 or 2 piece legs.)
3. The Swing-All (somewhat like a mini VLF)
4. The VLF

Misc Notes

- The HD-120 will be discontinued making way for the Swing All
- The Swing All is our heavy duty model. Make sure there is no more reference of the HPSI being heavy-duty
- Major changes for the VLF include triangulated top means no more bottom strap
- Our smooth, reliable, and long lasting Rope Swing Hangars
- Upgradeable to the Fleet-Foot system
- Single height 2 piece legs. (1) for a better and less expensive shipping experience (The VLF legs are right on the edge of UPS oversize charges of \$600.00– \$800.00) and (2) an increase in length for a somewhat taller swing frame

- Made for heavy use and heavy weight
- We use 2 x 2" structural steel for the legs stronger more durable design
- No connecting straps or cross bars
- 5 foot model has a stainless steel eye-bolt single point suspension or with the optional swivel
- 4 foot model includes 2 swing hangars
- We are testing for max weight of over 800Lbs. And a 650 Lbs. working weight.
