

EVAC 4babies

Evacuation sling for the safe stairway evacuation of newborn infants in an emergency.

The Evac+Baby® slinged attachment which intergrates with the Evac+Chair® 300H, 500H & 600H allowing for the safe evacuation of newborn babies and infants from hospital wards and special care baby units, in the event of any emergency evacuation.

DESCRIPTION

The Evac+Baby® fits securely on any Evac+Chair® evacuation chair to enable a single operator to evacuate up to four babies at once with minimal effort. Attached over the handle and strapped to the front bar the Evac+Baby® can then be transported smoothly downstairs.

The Evac+Baby® features four individual pockets with detachable head supports to house each infant, with safety straps for added security.

The Evac+Chair® provides a quick, easy and safe emergency evacuation with a range of 440-500lbs weight capacity and allows for single person operation.
