BRACING FOR MOTION

THE NEW GENERATION OF CONTROL, COMFORT & SUPPORT

DeRoyal presents the revolutionary Element™ Sport ankle brace, engineered to provide true subtalar control through calcaneal stabilization and positioning. The unique patented and patent pending heel control strapping system holds the calcaneus under the talus; thus, controlling subtalar inversion and talar rotation to assist in tissue healing, preventing chronic instability and allowing for a quicker return to activity. In addition, the **Element™ Sport** ankle brace provides standard stirrup stabilization to reduce ankle joint inversion and eversion.

X Element™ Sport

BRACING FOR MOTION

User friendly dynamic closure strap provides circumferential compression for an intimate fit

Low profile design helps increase patient compliance

Functional hinge design allows for utilization of the brace prophylactically

Patented heel control strapping system holds the calcaneus under the talus controlling subtalar inversion and talar rotation

Rigid medial and lateral uprights prevent abnormal inversion and eversion

Low profile foot plate for a comfortable fit inside of shoes
