

Preemie Hand Splint

Bionix Preemie Hand Splint helps healthcare professionals prevent cortical thumb positioning without requiring the use of hospital resources and time investment to create a custom device.

► PROBLEM:

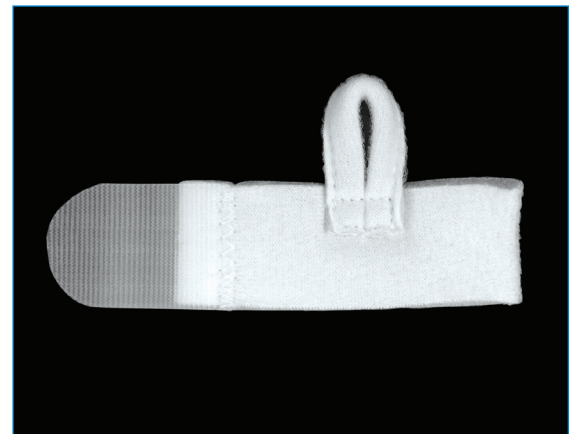

Preventing or repairing thumb in fist takes significant labor time working with the infant or creating a safe, comfortable homemade splint.

► SOLUTION:

The Preemie Hand Splint is a simple, pre-made device that comfortably fits infants preventing or repairing cortical thumb positioning.

► RESULTS:

Gently, yet effectively promote healthy hand and joint formation, leading to the development of normal motor skills.
