Human Care Lift Systems

Human Care lift systems are an ideal solution for the transfers taking place in the home and can allow caregivers to provide users safe and easy access throughout and between rooms.

The Altair Overhead Lift

- Safe and simple bed-to-chair transfers
- Easily moved from room to room
- Comfortable 3 point sling attachment
- Available in 3 weight capacities (330, 485, & 660 lbs)

The Roomer S Overhead Lift

- Seamless transfer between tracks, such as bedroom to bathroom, without lowering of the user
- Unique transfer system preserves doorways and eliminates need for costly home modification
- Available in 485 lbs. weight capacity

Rail Systems

- Custom designed to suit your specific lift and access needs, capable of reaching all areas of the home
- Discreet, low profile tracks may be ceiling, wall, or floor mounted
- Seamless and easy installation by certified professional installers
- Freestanding gantry options also available

Human Care Slings

- Broad range of anatomically designed slings provide user specific fit and application
- Variety of materials and accessories to ensure user comfort for your dependent or family member
- Over 22 unique models available

The Benefits of the Human Care Lift System

Manually repositioning or transferring patients and users to and from bed exposes caregivers to unnecessary strain and risk of injury. An overhead lift system makes this task easier not only for caregivers, but also provides a safer and more comfortable transfer for the user.

- Reduced strain and risk of injury
- Added safety and comfort for the user
- More dignified for user
- Access to areas floor lifts cannot reach

" *An overhead lift system is the best possible aid for moving a patient* "
