Re-Order #	Description	Size	Weight	Unit
914731	Human Anatomy Gel Maze	11"x18"	1.25 lbs	Each

Purpose

The young child has developed a curiosity to learn and educating them about the human anatomy opens the door for other subjects. This could lead to personal care (washing body parts) right, left, counting etc. In addition, the gel is soothing to the touch and reduces boredom, and anxiety. When the marble is pushed, it helps in the development of eye-hand coordination and in improving finger strength and dexterity.

Easy to Use

The sensory pad should be placed on any flat surface that is convenient to the child. A listing of the body parts could be referred to and the child should be asked to locate and identify a particular organ or body part. Also, the child should be directed to push the marble around and stop at each identifier and have the child spell or announce the names.

Easy Care

The gel-filled human anatomy can be cleaned either soap and water, liquid disinfectant or PDI wipes.

Caution

Use under the supervision of an adult and do not use for children cognitively under three (3) years old. Although the gel and vinyl are non-toxic, use of the product should be discontinued if the vinyl seal is broken.
