Airway management

AG CUFFILL® cuff pressure manometer

Now exclusive to Medline

Precise airway cuff pressure is critical to minimizing complications associated with intubation. Studies show that conventional methods caregivers use for cuff pressure readings are unreliable.[1] In fact, 52% of intubated patients have been found to be out of therapeutic cuff pressure range, putting them at risk for VAE or tracheal damage.[2]

AG CUFFILL can help. The pocket-sized and easy-to-use AG CUFFILL device is an accurate solution for both controlling cuff volume and measuring cuff pressure for cuffed ET tubes, trach tubes and LMAs.

Simple: Easily measure and adjust cuff pressure and volume of cuffed airways

Accurate: Digital volume and pressure readout, +/-2 (cmH20) accuracy with simple-one-handed calibration

Safe: Designed for single-patient use to help reduce the chances of cross-contamination risk

Accessible: Pocket-sized, light-weight, and stays at the patient's bedside

Cost effective: Priced to make regular cuff pressure checks and adjustments a new standard of care

SubG™ endotracheal tube

Our SubG subglottic endotracheal tubes are designed to help reduce the risk of nosocomial infections due to aspiration of oral and upper airway secretions.

- Polyurethane cuff helps to prevent channel formation
- High volume, low pressure barrel-shaped cuff for optimal sealing
- Kink-resistant tubing with easy-to-read insertion markings
- Subglottic suction port for removing secretions above the cuff
- Suction line cap keeps contaminants out of lumen

Item No.	Description	Pkg.
DYNJ18860	SubG ET tube, size # 6.0	10/bx
DYNJ18865	SubG ET tube, size # 6.5	10/bx
DYNJ18870	SubG ET tube, size # 7.0	10/bx
DYNJ18875	SubG ET tube, size # 7.5	10/bx
DYNJ18880	SubG ET tube, size # 8.0	10/bx
DYNJ18885	SubG ET tube, size # 8.5	10/bx

Advantages of the SubG ET tube

A. Subglottic suction line and evacuation port for removal of pooled secretions above the cuff

B. Barrel-shaped cuff made of polyurethane to aid in the reduction of microaspirations

C. Thermosensitive material, a bullnose tip, and easy to read marking for ease in insertion

Bronchial hygiene

Volume incentive spirometers

Our volume incentive spirometer uses an intuitive design to help patients correctly perform and monitor their post-surgical breathing exercises.

- One way valve ensures patients inhale rather than exhale through the device
- Easy to use floating ball indicator and guidelines help patients inhale at the proper rate
- Sliding goal indicator can be easily adjusted allowing patients to monitor their progress
- Flexible tubing and dual sided calibrations allow use in various positions
- Available in 2,500 mL and 5,000 mL capacities

Item No.	Description	Pkg.

PEP therapy and inspiratory muscle

Threshold IMT

- Provides consistent and specific pressure for inspiratory muscle strength and endurance training, regardless of how quickly or slowly patients breathe
- Incorporates a flow-independent, one-way valve to provide consistent resistance and features an adjustable specific pressure setting (in cm H2O) to be set by a healthcare professional
- When patients inhale through Threshold IMT, a spring-loaded valve provides resistance that exercises respiratory muscles through conditioning

Item No.	Description	Pkg.
HS730ML	Threshold inspiratory muscle trainer (IMT)	10/cs

HS730ML

Threshold PEP

- Used for airway clearance, bronchial hygiene, or as an alternative to chest physical therapy
- Incorporates a flow-independent, one-way valve to ensure consistent resistance with adjustable specific pressure settings (in cm H2O) which are set by the healthcare professional
- When patients exhale through Threshold PEP, the resistive load creates positive pressure that helps open the airways and allows mucus to be expelled during "huff" coughing (forced expiratory technique)

The choice is clear

With a unique transparent and disposable back, Medline regulators enhance efficiency, reduce costs and improve patient safety.

Identify contamination instantly

Up to 37% of suction regulators in hospitals are contaminated due to fluid breaches, and pathogens can spread back through the suction line within 48 hours.[1] The Medline Suction Regulator has a clear back plate offering a view of the internal components of the regulator, so it's easy to see when it's contaminated.

1. Suction Regulators: A Potential Vector for Hospital Acquired Pathogens by Keith S. Kaye, MD, MPH; Dror Marchaim, MD; Chester Smialowicz, MD; Lauren Bentley, MSBME

There's no time for downtime

The clear back plate provides an internal view of the regulator, making it possible to see fluid breaches. Plus, cleaning is simple: the unit is easily taken apart, allowing you to discard the contaminated back plate and replace with a new component in minutes.

Step 1:
Remove contaminated regulator

Step 2:
Dispose

Step 3:
Reassemble with only 1 NEW component in just minutes

Bypass heat and moisture exchanger

The AARC recommends that ventilator circuits should not be routinely changed and that passive humidifiers can be used for up to 48 hours.[1] It is widely understood that the opening of a respiratory circuit increases the risk of hospital acquired infection. Delivering aerosolized medication creates a challenge in maintaining a closed circuit.

The Medline Bypass Heat and Moisture Exchanger supports AARC clinical recommendations by eliminating the need to open the circuit during aerosol medication delivery for up to 72 hours.

Features:

- Easy and intuitive to use
- Clear marking of "HME" and "Aerosol" modes
- Use for up to 72 hours

Performance specifications

- Tidal volume 250–1500 mL
- Moisture output 32.09 mg H_2O/L @ 500 mL TV at 72 hours
- Resistance to flow 0.6 cm H_2O @ 30 L/min flow
- Dead space 29.2 mL
- Weight 39.3 g
- Duration of use up to 72 hours

OptiChamber® Diamond

The OptiChamber® Diamond valved holding chamber's small and intuitive design enhances medication delivery and compliance for all patients.

- Detachable LiteTouch mask has a comfortable, soft-seal interface, designed to create ideal seal with minimal force
- Anti-static valved holding chamber, smaller than most conventional chambers, intuitive design that enhances medication delivery
- Even under low pediatric pressures and flows, valves open freely
- Stepped mouthpiece helps patients transition from pediatric facemasks to mouthpiece; allows attachment to a 22 mm connector
- Mouthpiece and adapter can be removed from the chamber for easy cleaning

Medline MDI spacers

Our spacers are designed for patients who have difficulty with metered dose inhalers (MDIs). With spacers, more medication is deposited in the lungs and less is deposited in the mouth and throat.

- A simple and economical way to improve effectiveness of inhaler
- Easy to use and helps avoid some of the unpleasant taste of inhaled medication
- Anti-static and compatible with any standard mask with a 22 mm fitting
- Masks are made of a soft silicone and fit snugly to ensure optimal drug delivery
- The collapsible model is portable and convenient

Ascend® masks

Patented AIRgel replaceable cushion is easily detached and reattached for easy cleaning and replacement. Leak ports are built-in, so a separate exhalation port is not needed.

- Minimizes pressure points and skin irritation
- Ergonomic cushion technology delivers an effective seal for the most comfortable fit
- Flexible spacebar with a unique bendable design provides superior stability, holding a seal without contacting the skin
- Lightweight, breathable headgear slides off easily with one hand
- 360° rotating swivel for optimal tube positioning and easier mobility

SuperSoft oxygen cannulas

Even short term use of an oxygen cannula can lead to the development of pressure ulcers on the ears and cheeks. The Medline SuperSoft nasal cannula is made of an advanced material that is soft, flexible and non-tacky. Also features curved, non-flared nasal prongs. You will notice a difference right away:

• Promote patient compliance with added comfort – patients are less apprehensive about wearing a cannula that feels soft and comfortable
• Not made with natural rubber latex

Crush-resistant tubing

Pulse oximeters

Fingertip pulse oximeters

Get quick and precise SpO_2 and pulse readings in seconds with our high-quality fingertip pulse oximeters. Small and lightweight, these clip sensors automatically take readings when a finger is inserted.

- Fit a wide range of finger sizes
- Long battery life and are solidly constructed for worry-free use
- All models include AAA batteries, lanyard and warranty

Basic finger pulse oximeter

- Small and lightweight, this clip sensor automatically takes readings when a finger is inserted and gives a precise reading in seconds
- Features a digital LCD screen that displays SpO2, pulse rate and pulse bar and lights up for easy reading in all lighting conditions
- Includes AAA batteries, lanyard and warranty
- Rx only
- 1 year warranty

HCSM70B, 1/ea

Soft-touch finger pulse oximeter

- Soft padding enhances patient comfort
- SpO_2, pulse rate, perfusion index, pulse bar, and waveforms
- Backlit OLED display with 7 viewing modes
- Adjustable brightness
- RX Only
- 1 year warranty

HCSM70S, 1/ea

Pediatric finger pulse oximeter

- Child-friendly frog design makes kids smile
- SpO_2, pulse rate, pulse bar, plethysmograph
- Patented multi-directional display has 6 viewing modes
- Bright, digital OLED with adjustable readout sizes
- Soft padding for patient comfort
- Hinged battery cover
- 2 year warranty

Resuscitation

Manual resuscitators

Innovations provide clinicians with improved ease of use. They are available in infant, pediatric and adult sizes, and come in drawstring bag color-coded to indicate size.

A better bag

- Delivers up to 99% FiO2
- Maneuverable – the body of the bag swivels 360° for multiple clinician hand positions, helping to reduce clinician fatigue
- Translucent – the translucent, lightweight bag body and components allow for visualization of vomitus or occlusions in the system
- Textured – provides an enhanced, non-slip grip
- Repositionable – the patient port swivels 360°, allowing the clinician freedom to move around the patient without placing excessive torque or stress on the tracheal tube or mask
- Manometer allows for a clear visual reading of the centimeters of water pressure being delivered to the patient

An improved mask

- Firmly sealing–premium material provides a soft cushion and a firm seal

Colorimetric CO_2 detectors

Medline's colorimetric CO_2 detectors offer a simple way to indicate the presence of carbon dioxide during a patient's breathing cycle.

It's quick response of changes in color between blue and yellow make it easy to visualize and determine whether exhaled CO_2 is present.

- Our CO_2 detectors are long lasting and can be used for up to 24 hours
- Both CO_2 detectors have a small internal dead space.
  Item No. CPRM2400 is 16 mL and CPRM2401 is 3 mL
- Offered in two sizes to meet your needs in supporting patients weighing 1 kg or greater

Item No.	Description	Pkg.
CPRM2400	Colorimetric CO_2 detector. For patients who weigh ≥10 kg (≥22-lbs.)	10/cs
CPRM2401	Colorimetric Pediatric CO_2 detector. For patients who weigh 1–15 kg (2.2–33-lbs.)	10/cs

Mouth-to-mask resuscitator mask

This ready-to-use CPR mask is a highly effective one-way filtering system that shields the rescuer and victim from the risk of cross-contamination.

- A clear plastic design allows for easy placement, and the soft inflated cuff improves the fit and patient comfort
- Standard 15 mm fittings are compatible with any resuscitator
- Standard mask size accommodates children and adults.
- Easy-to-understand illustrations printed on insert
- Includes hard plastic transport case

Hyperinflation systems

Help prevent or treat lung collapse with a hyperinflation system.
- Bag design uses a "dipped" process to enhance tactile sensitivity and improve control
- Uniform inflation and the highest level of performance
- 100% compliant with ISO 5362 standards
- Variety of sizes to more accurately fit every patient

Swivel port
Optimal mobility in confined spaces.

Pressure-release dial
Clinician adjusts dial to achieve and maintain targeted base pressure.

Manometer
Color-coded dial to measure delivered pressure.

Oxygen tubing
Choose from standard or universal connectors.

Pleated breathing bag
Four sizes to meet the needs of all your patients.

Pressure-release valve
At 40 or 25 cm/H20 the valve releases pressure to help prevent excessively high inspiratory pressures.

Mask
Available in all sizes, both inflatable and pre-inflated.

Suction catheters and trach care

NEW

ClearPro™ closed suction catheter

The power to set—and follow—best practice.

ClearPro provides the performance you expect without a time-based change-out recommendation on the label. This gives you the freedom to set your own change-out policy to meet both clinical and regulatory recommendations—and drive down costs.

Plus, it includes advanced features to help provide better care:
- Isolated cleaning chamber for rapid irrigation
- Pressure wiper seal to help maintain PEEP

Additional details:
- Kitted with all necessary adapters and connectors
- Does not contain DEHP
- Available in French sizes 10–16 with catheter depth markings and color-coded by ISO standards
