

OtoClear® Ear Irrigation Tip

Bionix OtoClear Ear Irrigation helps healthcare workers provide safe and comfortable ear irrigation without the backslash, at half the cost of a self-constructed device.

► PROBLEM:

Traditional ear irrigation shoots water directly into the ear canal, which can be painful, dangerous and messy.

► SOLUTION:

OtoClear Ear Irrigation Tips, with Gentle Touch Design, directs water to the ear canal wall, with three divergent streams, instead of directly at the Tympanic Membrane. And the flared design prevents backslash.

► RESULTS:

A safe, clean ear irrigation tip at half the cost of a self-constructed device.

PRODUCT OFFERING

“

Our office is very happy with the soft (OtoClear) tips. They are easier to maneuver in the ear canal and more comfortable for the patient.

USAGE INSTRUCTIONS

Insert *OtoClear* tip fully into the ear canal. The flared design of the *OtoClear* tip protects against over-insertion.

Begin irrigation. Note: The *OtoClear* tip directs the water towards the walls of the ear canal creating a turbulent lavage that effectively dislodges the cerumen. The exit portals control back-splash and deliver the effluent into the basin.

When procedure is complete, remove and dispose of the single-use *OtoClear* tip.

Thoroughly read the complete directions before using the *OtoClear* Ear Irrigation tip. Do not perform irrigation if perforations or tympanostomy tubes are present or suspected. Discontinue irrigation immediately if bleeding, irritation or other trauma to the ear canal or tympanic membrane occurs. Hard or impacted wax may require a cerumenolytic agent.
