

The

Swing All

4' and 5' sizes

Professional/Adult model
Portable Swing Frames

If you need sturdy, safe, and spectacular for your portable swing frame, then look no further than the new *Swing All*

4' model with standard round feet

Here is the 4' model. As you can see, it has a wide range of movement and stays very steady for fun swinging. We use 2" x 2" square tubing for sturdiness and it performs magnificently. The top is a large and heavy to hold the legs. The extra weight really helps to keep it in place. This is just one tough swing frame made to swing up to 650 Lbs. all day long for any size user. The *Swing All* can also be used to hold a platform for wheelchair use.

Wheelchair Platform and Ramp is available

John is about 6' tall

On the 5' model About 850 Lbs

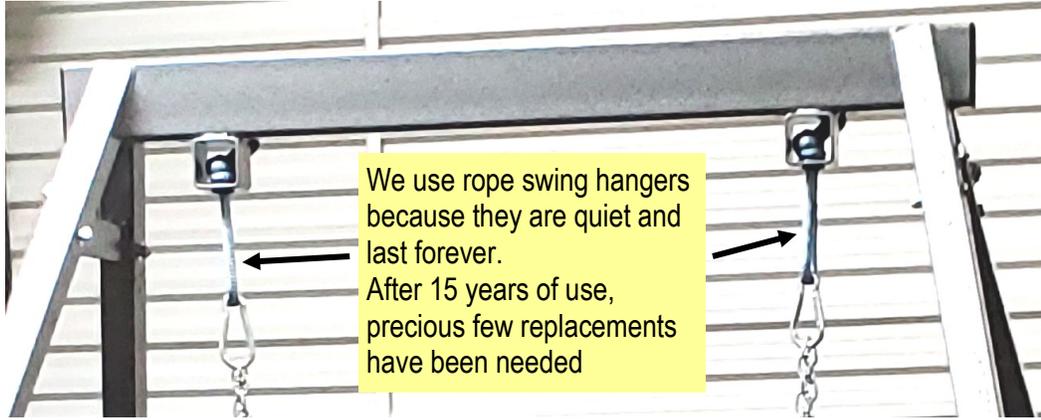

With Fleet-Feet

Our new **Swing-All** brings strength and stability in an easily set-up portable swing frame.

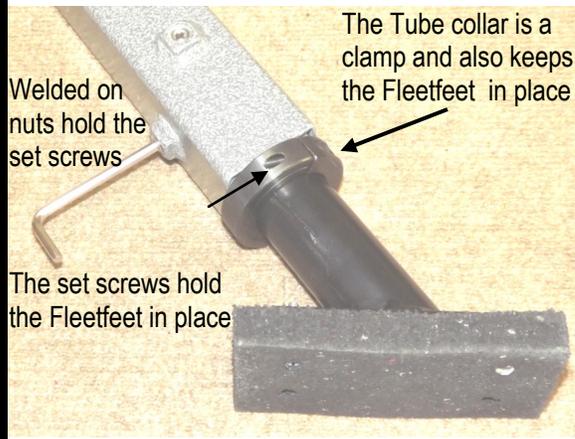

From top to bottom.....

- Triangulated frame top means no cross bars to get in your way but will hold 100's of Lbs. more that most other portable frames
- The 2" x 4" steel tube top that holds the legs is .120 wall giving the **Swing All** a working/swinging load 650 Lbs.
- This is much more substantial than our round tube frames
- The 5' model has a center swivel option along with the 2 swing seat rope hangers
- Easy set-up (see video)
- The 2" x 2" square tube legs are about indestructible
- You have the ability to adjust the length of each leg to conform to an uneven floor or to make it a few inches taller
- Fleet-Feet makes it less likely to mar smooth floors
- We use only top quality components and fasteners throughout
- Set-up is pretty easy and should take about 10 minutes (first time)
- Ramp and Platform package for wheelchair use soon available.
- Rope swing hangers

For better floor protection, adjustable height, and better stability you can Upgrade to our new

Fleet-Feet Flat Pad System

You can remove the 4 bolts and use the holes in the plate and rubber mat to fasten firmly to almost any floor
